

Tutorial 5 - C++ Basic Input/Output & Reserved Keywords

Key Concepts:

Input/Output Streams in C++:

- **Input Stream:**
 - Direction: Input device (e.g., keyboard) → Main memory.
 - Keyword: `cin`.
 - Operator: `>>` (Extraction operator).
 - **Output Stream:**
 - Direction: Main memory → Output device (e.g., screen).
 - Keyword: `cout`.
 - Operator: `<<` (Insertion operator).
-

Practical Code Explanation:

```
1 #include <iostream>
2 using namespace std;
3 int main() {
4     int num1, num2;
5     cout << "Enter the value of num1:\n"; // Print message (Insertion operator)
6     cin >> num1; // Take input from user (Extraction operator)
7     cout << "Enter the value of num2:\n"; // Print message
8     cin >> num2; // Take input from user
9     cout << "The sum is " << num1 + num2; // Print sum of num1 and num2
10    return 0;
11 }
12
```

Program Output:

1. Execution 1:

Input: `num1 = 54, num2 = 4.`

Output: `The sum is 58.`

2. Execution 2:

Input: `num1 = 5, num2 = 8.`

Output: `The sum is 13.`

Important Points:

1. **Insertion Operator:** `<<`
 - Used with `cout` to print messages or values to the screen.
 2. **Extraction Operator:** `>>`
 - Used with `cin` to take input at runtime from the user.
 3. **Keywords:**
 - `cout` : Print to the screen.
 - `cin` : Input values at runtime.
-

Reserved Keywords in C++:

- **Definition:** Keywords that are predefined by the language and cannot be used as variable names.
 - Examples: `int`, `char`, `float`, `while`, `if`, `else`, `return`, etc.
-

Short Notes for Notebook:

Input/Output in C++:

1. `cin` → Input stream (takes input from user).
2. `cout` → Output stream (prints messages/values).
3. `>>` → Extraction operator (used with `cin`).
4. `<<` → Insertion operator (used with `cout`).

Example:

```
1 int num1, num2;
2 cin >> num1; // Take input
3 cin >> num2;
4 cout << "Sum is " << num1 + num2; // Output result
5
```

Reserved Keywords:

- Cannot be redefined or used as variable names.
- Examples:
 - Control: `if`, `else`, `while`, `for`, `switch`.
 - Data: `int`, `float`, `char`, `bool`.
 - Others: `return`, `void`, `namespace`.
